

Dragon Naturally Speaking

Dragon Naturally Speaking is **speech recognition software**. If you find typing difficult or find it easier to talk rather than type, you could use Dragon. It is often **faster than typing**, and once trained to your voice, is 99% accurate.

In order to be accurate, Dragon must **learn how you speak**; so, when it makes a mistake, it must be corrected or else it will not learn.

Here are **some tips** on how to use Dragon:

- Start off **small and often**, use Dragon to compose emails, tweets or Facebook statuses, correcting mistakes as you go.
- Gradually **increase the length of typing**, do not start with your dissertation!

Check out this **video** that demonstrates how Dragon Naturally Speaking works:
